

SKY MIND

Better Decisions
for Airlines

Digitally transform your supply chain

SkyMind is an IoT-powered supply chain operating system that tracks and maintains optimal stock levels of goods and assets at every point.

By collecting real-time operational data from multiple sources, it provides actionable insights and simulations for better decision-making and cost reductions across your entire supply chain.

SkyMind also offers detailed CO₂ emission insights, empowering businesses to reduce emissions across their operations.

A logger solution for every scenario

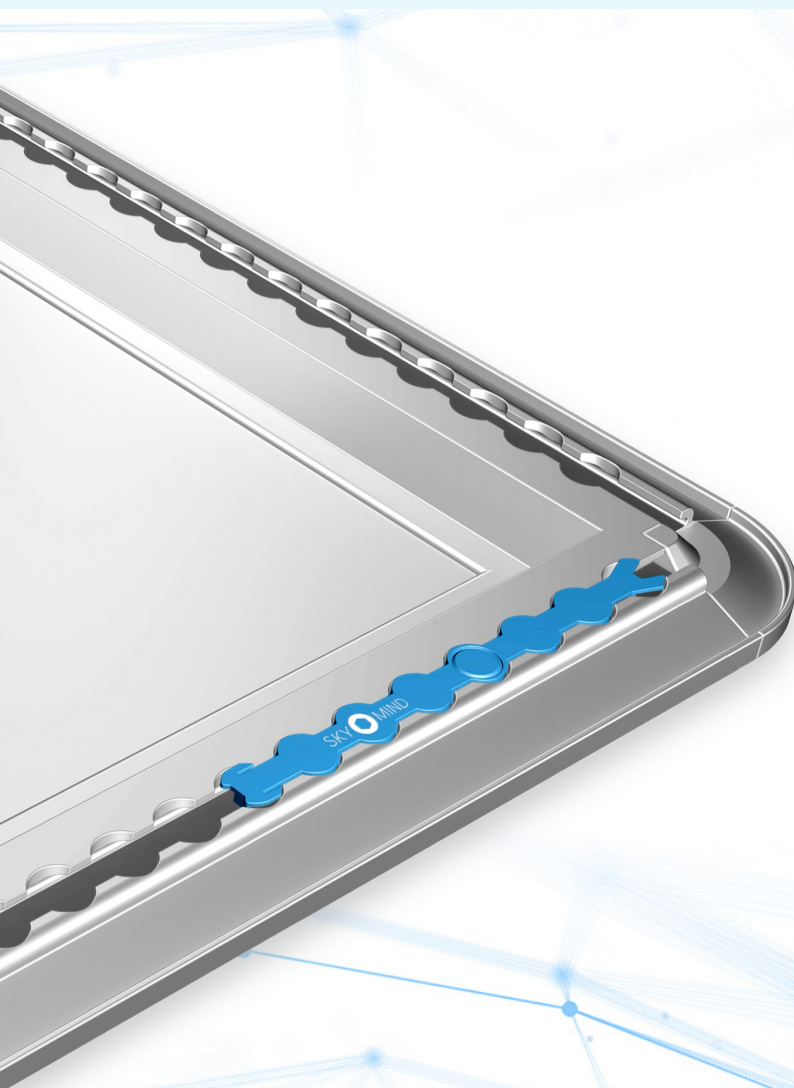

Our loggers provide you with next-gen insight into your supply chain and can be easily installed and set up with any ULD or asset.

Cutting-edge logger technology

SkyMind asset tracking loggers provide full visibility for all types of ULDs and assets with a long battery lifetime and minimal infrastructure needs. Using state-of-the-art IoT sensors, our loggers provide real-time insights into the location and condition of your assets. Even in the most challenging environments, tracking remains uninterrupted and assets are never compromised.

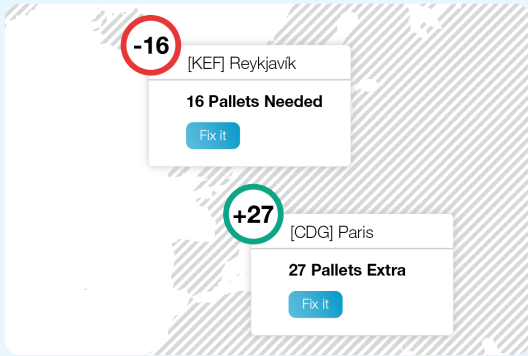

Ease of use and implementation

The mobile-enabled solution offers easy implementation and usage, with a significant decrease in gateway infrastructure and a long range of up to 1km. It provides robust coverage, both indoors and outdoors, even in areas with limited reception. Loggers can be easily attached to ULDs and inside containers.

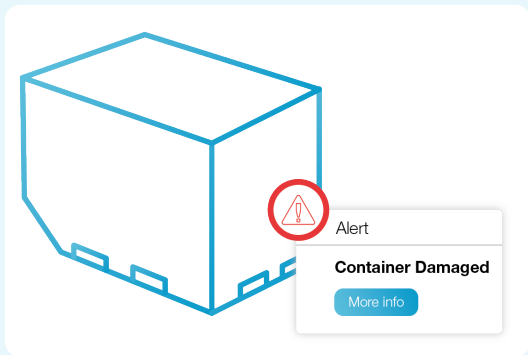

Discover SkyMind

Explore how SkyMind brings predictability and efficiency to your supply chain, empowering your team with cutting-edge technology and data-driven solutions.

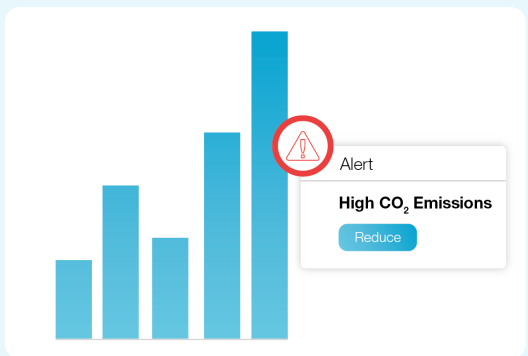

STREAMLINED ULD DISPOSITIONING

Optimize ULD allocation and ensure the right amount of assets are in the right place at the right time. Our advanced AI-powered tracking-as-a-service model helps you achieve your financial goals while seamlessly connecting people with products.

PROACTIVE REVENUE PROTECTION

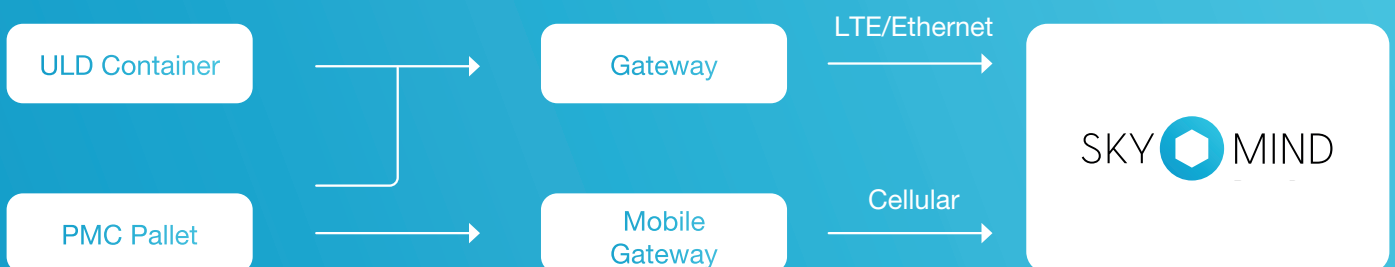

Seamless cargo tracking allows you to monitor shipments in real time and identify potential issues proactively to protect revenues. In the event of deviations, SkyMind can quickly identify the source and cause.

ACCURATE CO₂ TRACKING AND OPTIMIZATION

Establish accurate CO₂ baselines and pinpoint hotspots. Simulate and then implement CO₂ reduction measures at every stage of your supply chain. SkyMind also gives you access to detailed and accurate emission reports.
